

### Leveling Agents KC758

Be used in all kinds of powder coatings, such as epoxy coatings, hybrid polyester coatings, pure polyester coatings.

### Composition:

Modified acrylate copolymer with SiO<sub>2</sub>

### Typical Properties:

Active matter percent: 60%;

Uniform surface tension;

Anti-crater;

Strengthen the surface hardness of powder coatings;

Eliminate the "orange peel" and pinholes;

Promote levelling and wetting.

Least shelf life: 2 years

Net Weight: 25kg

Storage: polyethylene-lined kraft barrel

### Special Features and Benefits

Eliminate the "orange peel" and pinholes.

### Recommended Use

KC758 is used in all kinds of powder coatings.

### Recommended Levels

0.6 – 1.5 % additive (as supplied) based on the total formulation when extruding with all formulation components.

The above recommended levels can be used for orientation. Optimal levels are determined through a series of laboratory tests.
